According to our (Global Info Research) latest study, the global Plastics And Polymers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Polymers & plastics are some of the most important and most widely used chemical products in industry and consumer markets. Polymers /plastics are produced by chemically linking one or more “link” chemicals to produce long chains of strongly connected chemicals called polymers. They are used for manufacturing consumer products, such as coatings, lubricants, consumer goods, aerospace, building materials etc. Polymers and plastics are being used as an alternative to traditional metal or mineral based products due to their cost-effectiveness, high performance and low weight.

Bio based plastic is gaining prominence among the users and manufacturers recently. Bio based plastics have a very high degree of recyclable potential and are made from renewable or non-petroleum raw materials. Cost optimization are made up of driving the demand for bio based plastics. Industries such as the packaging industry has been leading the adoption of the bio-based plastics for processed food packaging.
