Abstracts

According to our (Global Info Research) latest study, the global Plastomers market size was valued at USD 5274.6 million in 2023 and is forecast to a readjusted size of USD 7476.6 million by 2030 with a CAGR of 5.1% during review period.

Plastomers or polyolefin plastomers (POP) are a class of high-performance polymers. The uniqueness of this plastic lies in their toughness, clarity, and excellent sealability, which is a result of their molecular build up. They are low-density with narrow composition distribution and narrow molecular weight distribution.

The U.S. and Europe are the largest markets of packaged food. Growth in the packaged food industry depends on growth of population. The slow growth in population along with rise in importance of organic food products is affecting the market growth. Films manufactured for food packaging applications account for a major consumption of plastomers. Therefore, decrease in demand from the packaging industry of the U.S. and Europe restricts the growth of the global plastomer market.

The Global Info Research report includes an overview of the development of the Plastomers industry chain, the market status of Packaging (Ethylene-alpha Olefin Copolymer, Others), Film Stretch & Shrink (Ethylene-alpha Olefin Copolymer, Others), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Plastomers.

Regionally, the report analyzes the Plastomers markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global Plastomers market, with robust domestic demand, supportive policies, and a strong

manufacturing base.
