The global Plate Air Cooler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Plate Air Cooler is a device used for heat exchange to cool or heat an air stream. It is composed of a series of parallel metal plates, and the heat exchange of air is realized through the heat conduction and convection heat transfer between the plates.

Plate air coolers usually consist of two types of plates: fin plate and flat plate. A finned plate is a plate with a fin structure that improves heat transfer efficiency by increasing the surface area. A flat plate is a flat plate without fins that regulates the direction and speed of air flow.
