## Abstracts

The global Plate Interbody Fusion Device market size is expected to reach \$ 633 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global plate interbody fusion device production reached approximately 227 k units, the average price is 2000 usd/unit. Plate interbody fusion device are generally referred to as integrated implants for anterior cervical surgery, which integrate the functions of interbody fusion cages and fixation plates.

In anterior cervical discectomy and fusion (ACDF), the device is implanted into the disc space to support height and promote fusion, while its anterior plate portion is directly fixed to the upper and lower vertebral bodies by screws, providing immediate mechanical stability, preventing implant migration and promoting bone fusion. It is a common design that combines support and fixation functions into one.

The annual production capacity of a single production line for plate interbody fusion devices is typically 18,000-20,000 units, with a gross profit margin of around 28%.

The downstream consumption of plate interbody fusion devices is distributed as follows: hospitals 68%, clinics 20%, other sectors 12%.

This report studies the global Plate Interbody Fusion Device production, demand, key manufacturers, and key regions.
