## Abstracts

The global Plate Link Conveyor Belts market size is expected to reach \$ 887 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Plate-type conveyor belts are heavy-duty conveyor belt structures made of metal plates connected by hinge shafts. They possess excellent load-bearing capacity, impact resistance, and operational stability, making them suitable for continuous operation. These conveyor belts are widely used in metallurgy, automotive manufacturing, waste treatment, recycling, and industrial assembly lines, and are particularly suitable for conveying heavy, sharp, or high-temperature materials. The plate-type conveyor belt industry chain includes upstream carbon steel, stainless steel plates, alloy materials, and surface treatment agents; midstream processes such as plate stamping, machining, hinge assembly, heat treatment, and surface treatment; and downstream applications covering metal processing plants, automotive factories, recycling facilities, and heavy industrial conveying systems, along with installation, maintenance, and refurbishment services to ensure long-term stable operation. In 2025, the global production of plate-type conveyor belts was approximately 12.2 million square meters, with a global average market price of approximately US\$50 per square meter. The gross profit margin of major companies in the industry ranged from 25% to 40%. In 2025, the global production capacity of plate-type conveyor belts was approximately 16.27 million square meters.

This report studies the global Plate Link Conveyor Belts production, demand, key manufacturers, and key regions.
