According to our (Global Info Research) latest study, the global Plate Mounting Sleeves market size was valued at US\$ 102 million in 2025 and is forecast to a readjusted size of US\$ 138 million by 2032 with a CAGR of 4.5% during review period.

Plate Mounting Sleeves are precision cylindrical sleeves used in flexographic printing to mount printing plates onto the printing cylinder or mandrel. They provide a stable, lightweight, and dimensionally accurate base for plate mounting, helping ensure print registration, repeatability, and consistent pressure during high-speed printing. These sleeves are commonly made from composite materials, fiberglass, carbon fiber, polyurethane, or rubber-coated structures, and are widely used in flexible packaging, labels, corrugated packaging, paper printing, and film printing applications. In 2025, global Plate Mounting Sleeves production reached approximately 257 k units, with an average global market price of around 385 USD/unit. The production capacity for Plate Mounting Sleeves in 2025 was approximately 300 k units. The typical gross profit margin for Plate Mounting Sleeves between 20% and 40%.

Plate Mounting Sleeves market is mainly driven by the growth of flexographic printing in flexible packaging, labels, and corrugated packaging, especially as brand owners demand faster job changeovers, higher print quality, and more efficient short-run production. Compared with traditional solid cylinders, mounting sleeves are lighter, easier to handle, and more suitable for fast plate replacement, which helps reduce downtime and improve production efficiency. Market demand is also supported by the expansion of food packaging, e-commerce packaging, and sustainable packaging materials, while product development is moving toward higher dimensional stability, longer service life, lower weight, and compatibility with high-speed flexo presses.
