The global Plateau Oxygen Generator market size is expected to reach \$ 1157.9 million by 2029, rising at a market growth of 9.1% CAGR during the forecast period (2023-2029).

Oxygen generators in plateaus, the air in plateaus is thin, and generally only have 50-70% of the density of plains. It is basically difficult to produce medical oxygen from oxygen generators used in plains to plateaus. High-altitude oxygen generators are the comprehensive technology of oxygen generator manufacturers. challenge. Oxygen concentrator is a kind of machine for producing oxygen. Its principle is to use air separation technology. Firstly, the air is compressed with high density, and the difference in the condensation point of each component in the air is used to separate the gas and liquid at a certain temperature, and then the rectification is carried out to separate it into oxygen and nitrogen. In general, because it is mostly used to produce oxygen, people are used to calling it an oxygen generator. Because oxygen and nitrogen are widely used, oxygen generators are also widely used in the national economy.
