The global Platelet Aggregometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Platelet aggregometer is an instrument used to measure the aggregation function of platelets. The platelet aggregation meter evaluates the state of platelet function by detecting the aggregation reaction of platelets. It usually uses blood samples and specific activators (such as ADP, collagen, platelet activating factor, etc.) to induce platelet aggregation, and then monitors and records changes in the platelet aggregation process through optical or electronic sensors.

This report studies the global Platelet Aggregometer production, demand, key manufacturers, and key regions.
