Abstracts

The global Platelet Shaking Storage Box market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The platelet oscillating storage box is to store the platelets in a constant temperature environment of 20°C-24°C while waiting for the infusion of the platelets after thawing. The platelet oscillating storage box is a device made according to this requirement. When the thawed platelets are placed flat on the storage rack in the inner cavity, the machine can continuously output a continuous reciprocating left and right with an amplitude of 50mm and a frequency of 60 cycles/min. Oscillation solves the problem of safe preservation of platelets.
