According to our (Global Info Research) latest study, the global Plates and Screws market size was valued at USD 5587.2 million in 2023 and is forecast to a readjusted size of USD 7174.4 million by 2030 with a CAGR of 3.6% during review period.

Internal fixation refers to fixation of screws and/or plates

Plates are like internal splints that hold the broken pieces of bone together. They are attached to the bone with screws. Plates may be left in place after healing is complete, or they may be removed (in select cases).

Screws are used for internal fixation more often than any other type of implant. Although the screw is a simple device, there are different designs based on the type of fracture and how the screw will be used. Screws come in different sizes for use with bones of different sizes. Screws can be used alone to hold a fracture, as well as with plates, rods, or nails. After the bone heals, screws may be either left in place or removed.

Global Plates and Screws key players include J & J, Stryker, Zimmer Biomet, etc. Global top 3 manufacturers hold a share over 68%.
