Plating Machine for Printed Circuit Board (PCB) is a machine used in the manufacturing of circuit boards. It is primarily used to deposit metal onto the circuit board in order to create conductive pathways on the board.

The machine uses an electrochemical process to deposit metal onto the circuit board. During this process, the circuit board is immersed in a solution called an electrolyte, while voltage is applied to trigger the electrochemical reaction. During this process, metal ions are deposited onto the circuit board, creating conductive pathways.
