## Abstracts

According to our (Global Info Research) latest study, the global Plating Power Supplies market size was valued at USD 110.1 million in 2023 and is forecast to a readjusted size of USD 170.1 million by 2030 with a CAGR of 6.4% during review period.

Typically, dc power supplies provide a well-regulated current or voltage level that is pre-set and then the supply turned on and off as needed. This is the typical function of a power supply in an electronic device such as a computer or battery charger. However, in the electroplating industry, plating engineers refer to power supplies as rectifiers. Not only does the dc output wave need to be regulated, but in certain applications, the output waveform must be precisely controlled as well. In the semiconductor and circuit-board industry, a different type of power supply is used. Engineers in these fields use rectifiers with a pulse periodic reverse (PPR) output to copper-plate their products to obtain increased speed and performance.

For the major players of Plating Power Supplies, Sansha Electric maintained its first place in the ranking in 2019, followed by Kraft Powercon, American Plating Power, Dynapower and VOLTEQ. The Top 5 players accounted for 14.34% of the Global Plating Power Supplies revenue market share in 2019.

In this study, the sales market for Plating Power Supplies was divided into five geographic regions. Asia-Pacific occupied the largest consumption market share with 62.38% in 2019. It is followed by Europe. North America, other regions have smaller market.

On the basis of product type, the 12V Output Voltage segment is projected to account

for the largest sales volume market share during the forecast period; this segment is estimated to account for 56.36% share in 2020 in terms of volume.

In the applications, Hardware Surface Treatment segment is estimated to account for the highest market share of 49.74% in terms of volume in 2020.
