According to our (Global Info Research) latest study, the global Platinum Based Catalysts market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Platinum Based Catalysts refers to the use of platinum as a catalyst in various chemical reactions. A catalyst is a substance that increases the rate of a chemical reaction without being consumed in the process. Platinum, due to its unique properties, is widely used as a catalyst in many industrial processes.

Platinum Based Catalysts can be employed in a variety of chemical reactions, such as hydrogenation, oxidation, dehydrogenation, and many others. They facilitate these reactions by providing an alternate reaction pathway with lower activation energy, allowing the reaction to occur more readily. Platinum exhibits excellent catalytic activity and stability under a wide range of reaction conditions, including high temperatures and corrosive environments. It has a high surface area, which provides more active sites for the reactants to interact and accelerate the reaction.
