Abstracts

According to our (Global Info Research) latest study, the global Platinum Carbon Catalyst (Pt/C) market size was valued at US\$ 418 million in 2025 and is forecast to a readjusted size of US\$ 1086 million by 2032 with a CAGR of 14.6% during review period.

Platinum carbon catalyst (Pt/C) is the core cathode catalyst in fuel cells, consisting of highly dispersed nano-sized platinum particles on a high specific surface area carbon support (such as carbon black, carbon nanotubes, or carbon fibers). Its primary function is to catalyze the hydrogen oxidation reaction (HOR) and oxygen reduction reaction (ORR), directly determining the power density, efficiency, and durability of the fuel cell. High catalytic activity, low precious metal usage, and long-term stability can be achieved by controlling the platinum particle size, loading, carbon support structure, and surface treatment. Platinum carbon catalysts still dominate the low-temperature PEM fuel cell (PEMFC) cathode market and are one of the core materials driving fuel cell commercialization. In 2025, global shipments of platinum carbon catalyst (Pt/C) were approximately 2.849 tons, with a unit price of approximately US\$142.66 thousand/kg and a gross margin of approximately 4.86%-15.3%.

With the rapid development of fuel cell vehicles, stationary power generation, and portable hydrogen energy devices, the demand for PEMFC cathode catalysts continues to grow. Pt/C catalysts, due to their high catalytic activity, mature commercialization processes, and stability, are widely used in PEMFC cathodes and are the industry's default mainstream catalyst. Developing highly active Pt/C catalysts with low Pt loading can help reduce fuel cell system costs while improving power output and lifespan, supporting the rapid commercialization of new energy vehicles and the hydrogen energy

industry.

Platinum resources are scarce and expensive, and the preparation process is complex, requiring high standards for production technology and quality control. Companies must ensure batch-to-batch consistency of catalysts; otherwise, PEMFC performance will be affected. The development of non-precious metal catalysts may create competitive pressure in the future, especially in cost-sensitive markets.

Automotive fuel cells still account for the majority of the Pt/C cathode catalyst market, while stationary power generation, backup power, and portable hydrogen energy devices represent a stable growth market. Future trends indicate that high-performance upgrades such as low-Pt high-activity catalysts, Pt Alloy/C, and core-shell Pt catalysts will gradually replace traditional Pt/C products, making technological upgrades the core of market competition.
