Abstracts

According to our (Global Info Research) latest study, the global Platinum Nickel Alloy market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The platinum nickel alloy is a platinum alloy composed of nickel added on the basis of platinum. At high temperature, it is a continuous solid solution, and two superstructure ordered phases NiPt and Ni3Pt are formed at a lower temperature, respectively having AuCu and Cu3Au type structures. In the platinum-rich alloy, as the nickel content increases, the density of the alloy decreases, the mechanical properties and electrical resistivity at room temperature increase, and the elongation and temperature coefficient of resistance decrease.

Platinum nickel alloys are important elastic alloys used to make elastic components such as filaments, springs, reeds, and brushes in precision instruments. The main practical alloys are PtNi5, PtNi8, PtNi20, and PtNi23.

The Global Info Research report includes an overview of the development of the Platinum Nickel Alloy industry chain, the market status of Spring (Powder, Ingot), Reed (Powder, Ingot), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Platinum Nickel Alloy.
