Abstracts

The global Platinum Spark Plugs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The main defining feature of platinum spark plugs is the use of a platinum center electrode. This electrode is typically thinner than copper electrodes found in standard spark plugs, allowing for a more precise spark and improved ignitability. The platinum material withstands high temperatures and chemical corrosion, ensuring reliable ignition and consistent performance over an extended period.

Platinum spark plugs are a type of automotive spark plug that feature a center electrode made of platinum. They are commonly used in gasoline engines and provide several advantages over traditional copper or standard spark plugs.
