According to our (Global Info Research) latest study, the global Plastic Formwork market size was valued at USD 1218.3 million in 2023 and is forecast to a readjusted size of USD 2528.7 million by 2030 with a CAGR of 11.0% during review period.

Plastic formwork is generally used for quick pours of concrete, and it's reusable, also as known as reusable plastic formwork. The formwork is assembled either from interlocking panels or from a modular system and is used for relatively simple concrete structures. It is not as versatile as timber formwork due to the prefabrication requirements and is best suited for lost-cost, repetitive structures such as mass housing schemes.

The market for plastic formwork has witnessed growth as construction practices evolve towards more efficient and sustainable methods. Plastic formwork offers advantages such as reduced construction time, cost-effectiveness, and environmental sustainability. The modular nature of plastic formwork allows for repetitive use, contributing to its economic viability. As the construction industry emphasizes speed, cost-efficiency, and eco-friendly practices, the demand for plastic formwork is expected to continue growing.
