According to our (Global Info Research) latest study, the global Plax Visualization Electric Toothbrush market size was valued at US\$ 245 million in 2025 and is forecast to a readjusted size of US\$ 387 million by 2032 with a CAGR of 7.1% during review period.

The plaque-visualizing electric toothbrush is a smart toothbrush that combines electric cleaning technology with optical/digital sensing technology. Using built-in LED light sources, fluorescent developers, or camera sensors, it displays the plaque distribution on the tooth surface in real time during brushing, helping users identify blind spots. Traditional electric toothbrushes cannot visually display cleaning results, often resulting in incomplete brushing. The plaque-visualizing electric toothbrush significantly improves brushing adherence and oral health management through visual feedback. The average price of this product is approximately \$165 per unit, with global sales of approximately 1.44 million units. The upstream components include optical modules (LEDs, cameras), motors, batteries, and bristle materials; the midstream consists of toothbrush manufacturers; and the downstream comprises retailers, e-commerce platforms, and dental clinics. The future trend is intelligentization + visualization + data-driven approaches, enhancing user experience through AI recognition and app interaction, while environmentally friendly materials (biodegradable bristles) will become a new highlight.
