The global PLC CPU Units market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A PLC CPU unit is a central unit of a programmable logic controller (PLC), which is an industrial computer that has been ruggedized and adapted for the control of manufacturing processes, such as assembly lines, machines, robotic devices, or any activity that requires high reliability, ease of programming, and process fault diagnosis. A PLC CPU unit is where the PLC program is stored and executed, and where the PLC logic, memory and communications are located. A PLC CPU unit can be compared to the human brain, as it takes input signals from sensors and switches, performs logic operations on them, and produces output actions to actuators and devices.
