## Abstracts

The global Pleated Membrane Filter Cartridge market size is expected to reach \$ 2424 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Pleated membrane filter cartridges are high-efficiency liquid and gas filtration consumables. Their core value lies in providing a large filtration area, low pressure drop, and high precision, making them widely used in the pharmaceutical, food and beverage, water treatment, and chemical industries. Pleated membrane filter cartridges are filter elements that fold microporous membranes or filter media into a pleated structure and encapsulate them into a filter cartridge. This design significantly increases the filtration area, extends service life, and reduces pressure drop. The average price of this product is approximately US\$37 per square meter, with global sales of approximately 48.7 million square meters.

The Pleated Membrane Filter industry concentration is not high; there are many manufacturers in the world, and high-end products mainly from U.S. and Western European. In China, the producers are mainly located in Hangzhou City, Zhejiang Province. Upstream supply relies on membrane materials such as polypropylene, PES, and PTFE, as well as support tubes and end cap plastics; downstream applications are concentrated in pharmaceuticals, food and beverage, water treatment, chemicals, and electronics. Future trends include high-flux, low-pressure-drop designs, biodegradable and environmentally friendly materials, intelligent monitoring (cartridge life and contamination detection), and modular system integration, driving the market towards high added value and sustainability.

This report studies the global Pleated Membrane Filter Cartridge production, demand, key manufacturers, and key regions.
