A Plug-in Mosquito Repeller, also known as a plug-in mosquito repellent device or electric mosquito repellent, is a type of insect repellent device designed to deter mosquitoes and other flying insects from indoor spaces. These devices typically use electrical power to operate and may contain a heating element or a fan to disperse mosquito repellent substances, providing protection against mosquito bites.

Device Structure: The plug-in mosquito repeller is a small, compact device that can be plugged into electrical outlets commonly found in homes or offices.

Repellent Substance: The device usually contains a replaceable or refillable mosquito repellent substance, which can be in the form of a liquid, solid tablet, or a heating pad.

Heat or Fan Mechanism: The device may have a heating element or a fan mechanism that activates when plugged in, facilitating the release or vaporization of the mosquito repellent substance.

Release of Repellent: As the device operates, it disperses the vaporized or heated mosquito repellent into the air in the room, creating a mosquito-free zone within the range of the device.

Mosquito Deterrence: The active ingredients in the repellent substance are designed to

deter and repel mosquitoes, making it less likely for them to enter the area protected by the device.
