## Abstracts

The global Plug Insulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Plug Insulator is an insulator used in power transmission and distribution equipment. It is usually used to protect the insulation performance of wires and conductors in power equipment, and to prevent short-circuit, leakage and other safety accidents in electrical equipment. Plug insulators are generally made of ceramics, glass fibers and other materials, which have excellent insulation performance and mechanical strength, and can withstand high voltage and high current. Plug insulators are usually divided into two types: fixed and detachable. The former is installed and fixed in the equipment, while the latter can be disassembled and replaced at any time. In power transmission and distribution systems, plug insulators are often used together with socket insulators to form socket plug connectors for connecting different electrical equipment and cables.
