The global Plum Shaped Elastic Coupling market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The plum-shaped elastic coupling is to install an integral plum-shaped elastic ring between the claws of two half-couplings of the same shape to realize the connection of the two half-couplings. Widely used in automobiles, machinery and other industries, because the plum blossom-shaped elastic coupling is only subjected to extrusion force during the process of transmitting torque, and not subject to the usual torque of rotating parts, it is not easy to wear during use, and its service life is greatly improved .

This report studies the global Plum Shaped Elastic Coupling production, demand, key manufacturers, and key regions.
