According to our (Global Info Research) latest study, the global Plunger Multiplex Pump market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. A plunger multiplex pump is a type of positive displacement pump that has a number of reciprocating plungers (usually between 2-8) that are driven by a common crankshaft or camshaft. As the plungers move back and forth, they create a pumping action that draws in fluid and pushes it out through the discharge line. This type of pump is typically used for high-pressure applications, such as pumping oil, gas, or water under high pressures. They are also popular in the oil and gas industry for hydraulic fracturing (fracking) applications, where they are used to inject hydraulic fluid into rock formations to extract oil or gas. Plunger multiplex pumps are known for their high efficiency, reliability, and durability, making them popular in a variety of industrial and commercial applications. They can handle a wide range of fluids, from corrosive chemicals to viscous oils, and are capable of handling high flow rates and pressures.
