## Abstracts

According to our (Global Info Research) latest study, the global PMC Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

By monitoring the production equipment, PMC system can read the status of the production equipment, the production parameters of each equipment, alarms, faults and other information. With these basic information, it is possible to monitor the production process, perform statistical analysis, provide timely data reports, establish equipment operation files, maintain files, etc. And adjust the production operation plan according to the operation of the equipment. With the PMC system, the original single and relatively independent individual equipment has become a whole (system). Usually, the working status and working data of the online equipment can be seen on the browser in the control room, and all the data are collected and queried in the MES system server. Field devices and superior management computer (or server) are mainly connected through the network. Looking at the equipment from above, there are basically three types, computers, PLCs, and hard-wired equipment directly connected.
