Abstracts

The global PMC Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

By monitoring the production equipment, PMC system can read the status of the production equipment, the production parameters of each equipment, alarms, faults and other information. With these basic information, it is possible to monitor the production process, perform statistical analysis, provide timely data reports, establish equipment operation files, maintain files, etc. And adjust the production operation plan according to the operation of the equipment. With the PMC system, the original single and relatively independent individual equipment has become a whole (system). Usually, the working status and working data of the online equipment can be seen on the browser in the control room, and all the data are collected and queried in the MES system server. Field devices and superior management computer (or server) are mainly connected through the network. Looking at the equipment from above, there are basically three types, computers, PLCs, and hard-wired equipment directly connected.

This report studies the global PMC Systems demand, key companies, and key regions.
