## Abstracts

According to our (Global Info Research) latest study, the global PMMA IOL market size was valued at USD 169.8 million in 2023 and is forecast to a readjusted size of USD 192.6 million by 2030 with a CAGR of 1.8% during review period.

PMMA IOL is a special lens made of synthetic materials. Its components include silica gel, polymethyl methacrylate, hydrogel and so on. The shape and function of PMMA IOL are similar to the lens of the human eye, with light weight, high optical performance, no antigenicity, inflammatory, carcinogenic and biodegradable properties. After cataract surgery, the cloudy lens was removed, and PMMA IOL was implanted in the eye to replace the original lens, so that the external object could be focused on the retina and the surrounding scene could be seen clearly.

PMMA IOLs were once a standard in cataract surgery due to their affordability and durability. However, the market for PMMA IOLs has been gradually declining as newer IOL technologies, such as foldable and multifocal IOLs, have gained popularity. In many developed markets, PMMA IOLs are being phased out in favor of more advanced options. Nevertheless, they may still have a role in specific cases, particularly in resource-constrained settings where cost-effectiveness is a primary consideration.
