Abstracts

The global PMMA Synthetic Dentures market size is expected to reach \$ 428 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Polymethyl methacrylate (PMMA) synthetic dentures are removable dental restorations made with acrylic resin as the base material, possessing good biocompatibility, processability, and aesthetics. Upstream components include MMA monomers, dental-grade PMMA resin, colorants, and auxiliary materials; downstream applications include dental clinics, dental hospitals, prosthesis centers, and the dental restoration market for the aging population.

The global average price of polymethyl methacrylate synthetic dentures is US\$324 per set, with sales of approximately 850,000 sets and global production capacity of approximately 900,000 sets. The industry profit margin reaches 18%.

The global market for polymethyl methacrylate (PMMA) synthetic dentures has maintained steady growth, primarily driven by an aging population and increased awareness of oral health. The European, American, and Japanese markets are dominated by high-end customized and digital dentures, while emerging markets are expanding their market share with cost-effective products. With the development of CAD/CAM and 3D printing technologies, PMMA materials are gradually upgrading towards higher strength, lower residual monomers, and better aesthetics, improving comfort and durability. Meanwhile, expanded health insurance coverage and the construction of primary-level oral healthcare systems are driving demand growth. Although dental implants have replaced some traditional dentures, price factors and limitations in the target population ensure that removable dentures still have stable demand. In the future, the industry will develop towards digital production,

environmentally friendly materials, and high value-added products.

This report studies the global PMMA Synthetic Dentures production, demand, key manufacturers, and key regions.
