Abstracts

PMU biodegradable cosmetic packaging is a cosmetic packaging material made of PMU material. PMU inorganic biodegradable materials, abbreviated as PMU materials, are used to replace disposable non degradable disposable plastic products (such as the original materials: polypropylene and polyethylene). Mainly using plastics (recycled waste plastics such as polypropylene (PP), polyethylene (PE), and polyvinyl chloride (PVC)) as raw materials, new wooden materials are produced by mixing waste plant fibers such as wood powder, rice husk, and straw, and then undergoing plastic processing processes such as extrusion, molding, and injection molding to produce boards or profiles.
