## Abstracts

According to our (Global Info Research) latest study, the global Pneumatic Anchor Drilling Rig market size was valued at US\$ 211 million in 2025 and is forecast to a readjusted size of US\$ 312 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global sales of Pneumatic Anchor Drilling Rigs reached 12,800 units, with an average selling price of US\$16,000 per unit. Pneumatic Anchor Drilling Rigs are mining roadway support construction equipment powered by compressed air, primarily used for drilling anchor bolt holes in the roof of coal and metal mines. They consist of a pneumatic motor, reduction mechanism, propulsion device, control valve group, and support frame. They feature a compact structure, flexible operation, high explosion-proof safety, and adaptability to humid and dusty environments, making them key equipment for roadway support and surrounding rock reinforcement construction. The industry's total production capacity is approximately 16,000 units per year, with an average gross profit margin of approximately 23%. Upstream raw materials mainly include alloy steel, pneumatic components, seals, and hydraulic accessories; downstream, they are supplied to coal and metal mining companies through mining equipment distributors and engineering contractors. Future development lies in optimizing and upgrading efficient and energy-saving pneumatic systems with modular design, and extending towards intelligent positioning and automated control. With the improvement of mine safety standards and the increasing trend of mechanization replacing manual labor, market demand continues to grow steadily, and companies with technological improvement and channel service capabilities will gain continuous business opportunities.
