Abstracts

Soft actuators, also known as pneumatic artificial muscles, generate force by deforming a flexible material with external energy. These artificial muscles are poised to extend their applications beyond industrial robotics, where traditional actuators have predominantly been used.

Pneumatic artificial muscles vary based on the type of energy input. Some, like polymer actuators, deform by applying electrical, magnetic, or chemical energy, while others, specifically pneumatic artificial muscles, deform by fluid pressure such as air or hydraulic pressure.

According to our (Global Info Research) latest study, the global Pneumatic Artificial Muscles market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
