Pneumatic Components are the components that use a source of compressed air to power moving parts. Pneumatic Components use compressed air to transmit and control energy. Pneumatic systems commonly use compressed atmospheric air, as it is abundant and inexpensive.

Scope of the Report:

This report focuses on the Pneumatic Components in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In the coming years there is an increasing demand for Pneumatic Components in the regions of United States and Europe that is expected to drive the market for more advanced Pneumatic Components. Growth in government budgets in the principal countries, increasing of machinery fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Pneumatic Components will drive growth in United States and Europe markets.

Globally, the Pneumatic Components industry market is concentrated as the manufacturing technology of Pneumatic Components is relatively matures than some high-tech equipment. And some enterprises, like SMC, Festo, Parker, Norgren, etc. are well-known for the wonderful performance of their Pneumatic Components and related services. At the same time, Europe, occupied 27.20% production market share in 2016, is remarkable in the global Pneumatic Components industry.

The consumption volume of Pneumatic Components is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Pneumatic Components industry may not keep that fast. But it is surely forecasted that the market of Pneumatic Components is still promising.

The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

With emerging economies growing faster, a strategy has been adopted by most leading vendors in the Pneumatic Components market to approach these areas. QYR analysis of the Pneumatic Components market indicated that China would account for the highest sales in 2022 with close to 26 percent of global sales coming from this region. Vendors recognize the importance of this region and are working towards penetrating this market by strengthening their sales and distribution networks.

The worldwide market for Pneumatic Components is expected to grow at a CAGR of roughly 7.0% over the next five years, will reach 19800 million US\$ in 2023, from 13200 million US\$ in 2017, according to a new GIR (Global Info Research) study.
