Lymphedema refers to a type of chronic swelling, or edema, which may occur in the arms, legs, neck, trunk or other body parts and causes severe and debilitating symptoms, including decreased mobility, skin breakdown, pain, increased risk of serious infection and marked psychosocial impairment, resulting in significant negative implications for a patient's health and quality of life. The disease occurs when the lymphatic vessels are unable to adequately drain protein-rich lymph fluid from the arms, legs or other regions of the body. Any condition or procedure that damages the lymph nodes or lymphatic vessels, such as surgery or treatment for breast and other cancers, obesity, infection, scar tissue formation, trauma or chronic venous insufficiency can cause lymphedema. The disease may also be caused by congenital malformation of the lymphatic system. Lymphedema is progressive in nature, worsens over time, and has no known cure.
