## Abstracts

According to our (Global Info Research) latest study, the global Pneumatic Diaphragm Actuator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A pneumatic diaphragm actuator is a type of actuator that utilizes a flexible diaphragm to convert air pressure into mechanical force. It is commonly used in valve automation to control the opening and closing of valves in various industries.

The diaphragm is usually made of a flexible and durable material such as rubber or elastomer. It separates the actuator's air chamber into two compartments: the top chamber and the bottom chamber. By applying air pressure to either side of the diaphragm, the actuator can create either an opening or closing force.
