According to our (Global Info Research) latest study, the global Pneumatic Flanged Ball Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Pneumatic flanged ball valve is a ball valve equipped with a pneumatic actuator. The execution speed of the pneumatic actuator is relatively fast, and does not require workers to do it themselves, which greatly saves human resources and time. The pneumatic flange ball valve is evolved from the globe valve. It has the same action of rotating 90 degrees, but the difference is that the cock body is a sphere with a circular through hole or channel passing through its axis. The ratio of the spherical surface to the channel opening should be such that when the ball is rotated 90 degrees, all spherical surfaces should appear at the inlet and outlet, thereby cutting off the flow.
