The global Pneumatic Furnace Building Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The pneumatic furnace building machine utilizes the principle of knocking the inner wall of the medium frequency furnace crucible with a pneumatic hammer to fill the gaps between the large and small particles of the furnace lining material, in order to achieve a tight lining material effect. The furnace building machine is designed with an automatic rotation device that can rotate automatically during use, and the input air volume can be adjusted at will to adjust the vibration force and ensure uniform tying effect.
