According to our (Global Info Research) latest study, the global Pneumatic Hoists market size was valued at US\$ 292 million in 2025 and is forecast to a readjusted size of US\$ 401 million by 2032 with a CAGR of 4.6% during review period.

In 2025, global Pneumatic Hoists production reached approximately 133.4 K Units, with an average global market price of around 2124 USD per Unit.

Pneumatic Hoists, also known as air hoists, are industrial lifting devices powered by compressed air instead of electricity. They use an air motor, gearbox, brake system, load chain or wire rope, hook, and control valve to lift, lower, and position heavy loads in industrial environments. Compared with electric hoists, pneumatic hoists are especially suitable for continuous-duty operation, hazardous environments, and areas where electrical sparks must be avoided. They are widely used in oil and gas, petrochemical, mining, shipbuilding, offshore platforms, foundries, automotive manufacturing, power plants, chemical plants, and general industrial maintenance.

Pneumatic hoists, with their unique characteristics of being powered by compressed air, inherently explosion-proof, dust and moisture resistant, smooth start-stop, and capable of high-frequency continuous operation, solve the industry pain points of traditional electric hoists, such as unsafe use, susceptibility to failure, and high maintenance costs in special industrial conditions like flammable and explosive environments, high-risk dust, and humidity. They fill the equipment gap for lifting and handling in high-risk environments, balancing operational safety, durability, and convenience, becoming an indispensable core lifting equipment for special working conditions. Driven by global industrial safety production management upgrades, the advancement of intelligent

transformation in high-risk industries, the release of demand for replacing outdated lifting equipment, and the new demand for special-condition lifting equipment from emerging industries, the industry continues to gain momentum for development.

Pneumatic Hoists focuses on high-strength alloy steel, die-cast aluminum alloys, precision pneumatic components, and high-performance sealing materials as its core upstream raw materials. Typical upstream raw material suppliers include SSAB, Thyssenkrupp, Nippon Steel, Baowu, Festo, SMC, and Freudenberg. Its downstream applications are mainly in the oil and gas, petrochemical, mining, shipbuilding, automotive, and machinery manufacturing industries. Typical users include Shell, ExxonMobil, TotalEnergies, Sinopec, and PetroChina.

The single-line production capacity of pneumatic hoists varies significantly depending on tonnage, automation level, and product positioning, typically ranging from several hundred to several thousand units. The industry gross profit margin for pneumatic hoists is usually between 15% and 25%.
