Pneumatic measuring instruments are a new type of measuring instrument used in the machinery manufacturing industry. They are generally composed of two parts: the measuring instrument body and the measuring device. Pneumatic measuring instruments can achieve micron-level inner diameter measurement accuracy. Its measurement principle is the comparative measurement method. Pneumatic measuring instruments use the flow characteristics of air to convert the change in the geometric size of the workpiece to be measured into the change in pressure, so as to read the geometric parameters of the workpiece to be measured on the pressure indicator, and the sampling circuit performs AD conversion to obtain the accurate measurement value of the inner diameter.
