## Abstracts

According to our (Global Info Research) latest study, the global Pneumatic Scotch Yoke Actuators market size was valued at US\$ 322 million in 2024 and is forecast to a readjusted size of USD 442 million by 2031 with a CAGR of 4.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Pneumatic Scotch Yoke Actuators are mechanical devices that use compressed air to generate linear motion, which is then converted into rotational motion through a Scotch yoke mechanism. This design delivers high torque output, especially at the beginning and end of the stroke, making it ideal for operating quarter-turn valves such as ball valves, butterfly valves, and plug valves. Pneumatic Scotch yoke actuators are valued for their durability, simplicity, and ability to provide consistent, powerful motion in heavy-duty industrial applications like oil and gas, chemical processing, water treatment, and power generation. Their robust construction and efficient torque generation make them a preferred choice where reliable and strong valve automation is required.
