Abstracts

The global Pneumatic Shearing Knives market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

After the host system sends out a displacement signal, the power of the pneumatic knife holder motor is turned on and starts to rotate. The motor rotates the worm shaft clockwise through the coupling of the connecting seat, so that the copper material worm wheel rotates. The external thread of cylindrical machining rotates with the internal thread of the inner hole of the upper tool holder. The inner hole of the worm gear cooperates with the outer circle of the center fixed axis of the tool post.

When the worm wheel rotates clockwise, the external thread on the upper part of the worm wheel lifts the upper tool holder body, the engaging disc of the upper tool holder body is separated from the engaging disc of the lower knife, and the reverse pin separates the groove of the reverse disc, and the tool holder body is lifted separation of facial teeth.
