Abstracts

The global Pneumatic Vises market size is expected to reach \$ 53.52 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global Pneumatic Vises production reached approximately 18,183 Units. The average price is approximately \$1,800. Pneumatic vises are workholding devices used on CNC machining centers, milling machines, five-axis machining systems, flexible manufacturing cells and automated loading systems. Their defining feature is the use of compressed air as the primary actuation source for clamping and releasing workpieces.

Based on our research, pneumatic vises should be understood as a narrow but strategically important segment within machine-tool workholding rather than a large standalone machinery category. Their core value is the conversion of manual clamping into air-actuated, repeatable and automation-ready workholding. In practical CNC environments, this value is reflected less in the vise body alone and more in cycle-time reduction, repeatable clamping force, consistent positioning, operator-independent loading and compatibility with machine M-codes, PLCs or robotic loading cells. Compared with conventional manual vises, pneumatic vises are particularly relevant in high-mix machining cells, palletized production, robotic loading systems and lights-out machining. Because many products are sold as machine-tool accessories, fixture modules or tooling-platform items, the market is not well captured by broad machine vise statistics. The resulting addressable market is much smaller than the overall machine vise or hydraulic workholding market, but it benefits from structural automation demand in CNC machining, five-axis manufacturing and flexible production cells. Official product evidence from established workholding companies confirms that the product category exists across North America, Europe, Japan, Taiwan and China, although naming conventions differ by region and supplier.

From a supply perspective, the global market is fragmented but clearly layered. North American suppliers are visible in CNC automation, self-centering vises and small-to-mid-sized workholding systems. German, Italian and Japanese companies occupy the higher-end part of the market through precision workholding, five-axis clamping, automated fixture systems and long-established machine-tool accessory channels. Taiwan remains an important manufacturing base for precision vises and CNC accessories, while Mainland Chinese suppliers are increasingly visible in pneumatic-hydraulic vises, self-centering vises and cost-effective CNC workholding products. India has a smaller but identifiable domestic supply base. A key feature of this market is the gap between the broad supplier pool and the core formal list: several companies sell air vises through tooling platforms or distribution channels, but the underlying OEM may not be disclosed; other companies have clear product evidence but limited financial transparency. For that reason, this study separates confirmed core manufacturers from extended suppliers, watchlist companies and excluded channel-only or machine-integrated cases.

Demand growth is driven by three connected trends: CNC productivity improvement, flexible automation and the spread of robotic loading. Pneumatic vises are especially useful where operators need rapid and repeatable clamping, where small and medium parts are loaded automatically, and where machining cells must operate with limited manual intervention. The broader automation backdrop supports this trend: global industrial robot installations remain at a high level, while machine-tool investment cycles vary by region. European machine-tool conditions have been more cyclical, whereas U.S. metalworking orders showed recovery momentum in 2025; Asian supply chains continue to upgrade machining automation. As a result, pneumatic machine vises are best modeled as a mid-growth niche rather than a high-growth robotics category. Product evolution is moving toward self-centering mechanisms, five-axis accessibility, zero-point compatibility, integrated air control, sensing and lights-out machining interfaces. Substitution pressure exists from hydraulic, electric and customized fixture systems, but compressed-air actuation remains attractive because it is simple, fast, widely available in machine shops and relatively easy to integrate.

This report studies the global Pneumatic Vises production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pneumatic Vises and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and

competition, as well as details the characteristics of Pneumatic Vises that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Pneumatic Vises total production and demand, 2021-2032, (K Units)

Global Pneumatic Vises total production value, 2021-2032, (USD Million)

Global Pneumatic Vises production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global Pneumatic Vises consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: Pneumatic Vises domestic production, consumption, key domestic manufacturers and share

Global Pneumatic Vises production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global Pneumatic Vises production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global Pneumatic Vises production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Pneumatic Vises market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Kurt Workholding, SCHUNK, KOSMEK, ROHM, AMF, Jergens, HOMGE, Gimbel Automation, Gerardi, Vektek, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Pneumatic Vises market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (K Units) and average price (US\$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered:

1. How big is the global Pneumatic Vises market?
2. What is the demand of the global Pneumatic Vises market?
3. What is the year over year growth of the global Pneumatic Vises market?
4. What is the production and production value of the global Pneumatic Vises market?
5. Who are the key producers in the global Pneumatic Vises market?
6. What are the growth factors driving the market demand?
