Abstracts

According to our (Global Info Research) latest study, the global Pneumatic Wafer Butterfly Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

As the name suggests, the pneumatic wafer butterfly valve adopts the method of wafer clamping, clamping the butterfly valve between the flanges at both ends of the pipeline, and then fixing it with a set of bolts through the bolt holes. The main advantages of the pneumatic flange butterfly valve are simple structure, small size, light weight, and low cost. The characteristics of the pneumatic butterfly valve are especially remarkable. The fluid resistance is small. The medium and large diameter pneumatic disc valve has a large effective flow area when it is fully opened, and the opening and closing is quick and labor-saving. The disc wrench rotates at an angle of 90 to complete the opening and closing. Since the medium force of the disc wrench on both sides of the shaft is nearly equal, the torque generated is in the opposite direction, so the opening and closing torque is small, and a good seal can be achieved under low pressure. It has excellent sealing performance at low temperature.
