The global Pocket Check Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A pocket check valve is a type of one-way valve that allows fluid or gas to flow in only one direction. It comes in a small size and is designed for use in low-pressure systems where the flow rate is relatively low. The valve consists of a disk or ball that moves along with the fluid flow and closes when the flow reverses, preventing backflow. Pocket check valves are commonly used in medical devices such as respiratory equipment, infusion sets, and pumps. They are also used in industrial applications such as chemical processing and food and beverage production.
