The global Pocket Tissue Folding Machine market size is expected to reach \$ 4914 million by 2032, rising at a market growth of 7.2% CAGR during the forecast period (2026-2032).

In 2025, global sales of pocket tissue folding machines reached approximately 450,000 units, with an average selling price of US\$6,500 per unit. Pocket tissue folding machines are automated devices specifically designed to fold tissues into standard-sized small packages. They are primarily used in the final stage of tissue production lines to improve efficiency and reduce labor costs. These machines can automatically fold tissues at high speed and precision and are commonly found in the production of tissues, wet wipes, and toilet paper. Upstream raw materials include stainless steel, aluminum alloys, precision mechanical parts, and electronic control systems; midstream involves machining, assembly, and debugging; downstream customers are mainly tissue manufacturers and packaging equipment manufacturers. In 2025, the global total production capacity was approximately 500,000 units, with an industry capacity utilization rate of approximately 89% and an overall gross profit margin of approximately 22%-28%. With rising living standards and increasing personal hygiene needs, global demand for convenient and environmentally friendly tissues continues to rise, and market demand will maintain stable growth. The future lies in developing towards intelligence, automation, and multi-functionality, improving folding precision and production efficiency, while optimizing the energy efficiency and environmental performance of equipment to meet increasingly stringent production standards and environmental regulations.
