## Abstracts

The global POCT Kits and Devices market size is expected to reach \$ 52460 million by 2029, rising at a market growth of 7.0% CAGR during the forecast period (2023-2029).

The POCT (Point of Care Testing) Kits and Devices Market are driven by the increasing demand for rapid and decentralized diagnostic solutions, offering timely and convenient healthcare testing. These kits and devices enable healthcare professionals to perform tests near the patient, reducing turnaround times and improving patient care. However, a significant challenge in this market is the need for accuracy and reliability in POCT results. Manufacturers must ensure that their products meet stringent quality standards to maintain trust in these point-of-care diagnostics. Regulatory compliance and data management also pose challenges, requiring companies to navigate complex regulatory landscapes and provide secure and efficient data handling solutions. Additionally, market competition and cost considerations necessitate a balance between affordability and advanced technology to meet the evolving demands of the healthcare industry while ensuring diagnostic accuracy.

Point-of-care (POC) is defined as medical testing at or near the site of patient care. The driving notion behind POCT is to bring the test conveniently and immediately to the patient. This increases the likelihood that the patient, physician, and care team will receive the results quicker, which allows for immediate clinical management decisions to be made.
