## **Abstracts**

According to our (Global Info Research) latest study, the global POE Ethernet Switch market size was valued at USD 4245.2 million in 2022 and is forecast to a readjusted size of USD 6768.2 million by 2029 with a CAGR of 6.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

As the demand for bandwidth & high data speed is continuously increasing along with growing number of internet users across the globe hence, Ethernet switch market is expected to experience decent growth during forecast period.

PoE (Power over Ethernet) describes any of several standardized or ad-hoc systems which pass electrical power along with data on twisted pair Ethernet cabling. This allows a single cable to provide both data connection and electrical power to devices such as wireless access points or IP cameras. Unlike standards such as Universal Serial Bus which also power devices over the data cables, PoE allows long cable lengths. Power may be carried on the same conductors as the data, or it may be carried on dedicated conductors in the same cable. A POE switch is a network switch that has Power over Ethernet injection built-in. Simply connect other network devices to the switch as normal, and the switch will detect whether they are POE-compatible and enable power automatically.

This report is a detailed and comprehensive analysis for global POE Ethernet Switch market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
