Abstracts

The global POE Ethernet Switch market size is expected to reach \$ 6768.2 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

As the demand for bandwidth & high data speed is continuously increasing along with growing number of internet users across the globe hence, Ethernet switch market is expected to experience decent growth during forecast period.

PoE (Power over Ethernet) describes any of several standardized or ad-hoc systems which pass electrical power along with data on twisted pair Ethernet cabling. This allows a single cable to provide both data connection and electrical power to devices such as wireless access points or IP cameras. Unlike standards such as Universal Serial Bus which also power devices over the data cables, PoE allows long cable lengths. Power may be carried on the same conductors as the data, or it may be carried on dedicated conductors in the same cable. A POE switch is a network switch that has Power over Ethernet injection built-in. Simply connect other network devices to the switch as normal, and the switch will detect whether they are POE-compatible and enable power automatically.

This report studies the global POE Ethernet Switch production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for POE Ethernet Switch, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
