According to our (Global Info Research) latest study, the global POE Foam Materials market size was valued at US\$ 1135 million in 2024 and is forecast to a readjusted size of USD 1721 million by 2031 with a CAGR of 5.0% during review period.

POE (Polyolefin Elastomer) foam is a type of closed-cell foam known for its excellent flexibility, resilience, and low density. Unlike traditional foams like EVA, POE offers superior cushioning and energy return. It's produced by foaming POE resin, resulting in a lightweight material with a soft, rubbery feel. POE foam is highly resistant to chemicals, water, and UV radiation, making it suitable for various applications. Its unique properties make it ideal for footwear midsoles, sports equipment padding, automotive components, and packaging.

The POE foam industry is experiencing significant growth driven by several key trends. Firstly, there's a strong push towards lightweighting in various industries, particularly automotive and footwear. POE foam's low density makes it an attractive alternative to heavier materials, contributing to improved fuel efficiency in vehicles and enhanced comfort in shoes. Secondly, the demand for high-performance cushioning and shock absorption is increasing, especially in sports and protective equipment. POE's superior energy return and resilience make it ideal for these applications. Sustainability is another major trend, with manufacturers exploring bio-based POE and recycled POE options to reduce environmental impact. This aligns with the growing consumer preference for eco-friendly products. Furthermore, advancements in manufacturing technologies are enabling the production of POE foams with finer cell structures and improved performance characteristics. This allows for greater design flexibility and customization to meet specific application needs. Finally, the development of new POE

grades with enhanced properties, such as improved temperature resistance and chemical resistance, is broadening the range of applications for this versatile material. This includes expansion into areas like medical devices and industrial sealing.
