Abstracts

According to our (Global Info Research) latest study, the global POE Plastic market size was valued at US\$ 2569 million in 2024 and is forecast to a readjusted size of USD 3371 million by 2031 with a CAGR of 4.0% during review period.

POE plastic is a thermoplastic elastomer that uses metallocene catalyst to realize in-situ polymerization of ethylene and octene. Its characteristics are: the soft chain crimp structure of octene and the crystalline ethylene chain as the physical cross-linking point, making it both excellent toughness and good processability. There is no unsaturated double bond in the molecular structure of POE plastics, which has excellent aging resistance. POE plastics have narrow molecular weight distribution, good fluidity and good compatibility with polyolefins. Good fluidity can improve the dispersion effect of filler, and can also improve the strength of the weld line of products.
