Abstracts

The global Point-of-Care Workstation market size is expected to reach \$ 817 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

A Point-of-Care Workstation is a mobile or wall-mounted clinical computing platform designed for bedside and care-area workflows. It typically integrates a medical-grade computer (or thin client), display and input devices, a power system (hot-swappable batteries or centralized power), barcode/RFID peripherals, mounting options, and secured storage, enabling real-time EMR access, medication administration workflows, documentation, and clinical collaboration directly at the point of care.

Upstream inputs include aluminum/steel frames, casters and brakes, lift columns, harnesses/connectors, medical-grade displays and compute endpoints (thin client/embedded PC), battery and power-management modules, drawers/locks, and cleanable chemical-resistant plastics. Demand comes from hospitals and long-term care, purchased largely via projects emphasizing uptime, cleanability, and runtime.

In 2025, global point-of-care workstation production reached approximately 1.5 million units, with an average global market price is \$350 per unit.

This report studies the global Point-of-Care Workstation production, demand, key manufacturers, and key regions.
